

Development Progress Report 2

By: Patrick O'Brien

The second development phase was focused on improving the user experience and enhancing the appearance of the webpage. To accomplish this, I used the website we worked with in class (MDN Web Docs) to research how to use CSS (Cascading Style Sheets). The first update to improve the user experience was changing the width to 100% to make the dropdowns and slider span across the entire page, making them easier to see and access. Then I increased the font size to make the interface easier to read, ensuring that elderly users are accommodated. Finally, I looked up the number corresponding to the color "Kelly Green" to update the heading. Moving forward I would like to increase the font size of the labels for the inputs and outputs to match the inner text, I was having trouble doing so.
